End of Life Notice

Monday, January 07, 2008

To our LTEPIC-25 customers,

ICS part number LTEPIC-25 is a PRIMUS EPIC LAN interface kit that has been sold by ICS for the past 4 and a half years. The network cards used in this kit were made by Billionton Systems and were identified by Honeywell as the only remaining 10Base2 PCMCIA network card manufacturer 4 and a half years ago. At that time, ICS procured 2000 of these for subsequent delivery to manufacturers and their customers who had aircraft equipped with Honeywell PRIMUS EPIC and APEX Avionics.

Initially, this supply was anticipated (by Honeywell) to last 7 years with spares. Increased aircraft sales half led this supply to be depleted earlier than anticipated. The stock of the network card used in this kit has been depleted since Late October 2007 and none are presently available.

As a replacement option, ICS has designed and built a new product called the LANTAP-10. This piece of equipment performs the same function as the LTEPIC-25 in that it allows customer supplied Ethernet based equipment to be interfaced to the PRIMUS EPIC aircraft LAN. The new product differs in that it does not require a PCMCIA card slot, it is operating system independent, and requires no driver software. The LANTAP-10 is a rugged metal box that interfaces to customer equipment via 10BaseT Ethernet and a USB cable. The device uses the USB bus for power and the existing 10/100/1000 Ethernet jack of the customer's equipment for data transfer. We regret that the LTEPIC has become unavailable more quickly than anticipated, however, we have taken steps to ensure the continued supply of a suitable interface. At present, we have on hand enough parts to build approximately 3000 of the LANTAP-10 units, and will generally carry between 100 and 200 units built and ready for shipment at any given time. We anticipate that 3000 units will carry everyone forward for at least another 6+ years.

We would highly recommend that you check our website (www.icsaero.com) under PRODUCTS for more information on the LANTAP-10 product.

Best regards,

Kevin W. Jacobson
President and General Manager
